DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by O'Brien, U.S. Patent No. 5,222,398.

Regarding claim 1, O'Brien discloses a thin film precision load cell with features of the claimed invention including a load cell with notches in the side (see figure 2).

Regarding claims 2-3, in order to make a notch, material has to be removed.

Regarding claim 4, there are strain gauges (elements 42) connected to the load cell.

Regarding claim 5, depending on the relative surface definition the strain gauges are located in a perpendicular surface to the side of the load cell.

Regarding claim 6, material is removed from the surface (see figure 3).

Regarding claims 7-8, the load cell has attachment holes (element 30) for connection.

Regarding claim 9, the strain gauges are generally combined to form a bridge (see figure 6).

Regarding claim 10, the load cell is formed by combination of several bodies (see figure 1 or 2).

Regarding claim 11, 15, 17-19, the load cell has curve sides (see figure, 1, or 3).

Art Unit: 2855

Regarding claims 12-13, 16, in order to make a curve side, material has to be naturally removed.

Regarding claim 14, there are strain gauges (elements 42) connected to the load cell.

Regarding claim 17, the load cell is formed by combination of several bodies.

Regarding claim 20, the load cell is formed by combination of several bodies.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
